

Exercise

Legacy code has been migrated into Spring Boot application with SQL database, RESTful web services and AngularJS frontend.

Task

Application is to be deployed into production, but in final code review step serious doubts were raised about the quality of the application. The reviewers recommendation was a full application rewrite. Your task is to identify and fix all flaws in the code-package, ensuring that the resulting application is ready to be put into production.

Rewrite and improve all parts of the code package.

Zip and upload your solution to the folder you downloaded it from on google drive.

Running the application

Linux:

`./mvnw spring-boot:run` and go to a browser at [http://localhost:8080] (http://localhost:8080).

Windows:

`./mvnw.cmd spring-boot:run` and go to a browser at [http://localhost:8080] (http://localhost:8080).
